# Ferrule Removal Tool

- **Works with PEEK™ and metal fittings**
- **Inexpensive and well-made**
- **Small enough to keep in your pocket**

This tool removes high pressure PEEK™ or stainless steel ferrules that are stuck in your system. Works great for removing two-piece self-locking ferrule systems and single PEEK™ ferrules.

To use, insert the smaller drill bit end of the tool into the broken fitting. Turn clockwise to drill out a larger hole. Insert the larger end of the tool into the hole and turn counter-clockwise until a connection is felt. Gently continue turning until the fitting comes out of the port.
